

Business Requirement Document (BRD)

Application Name: ShopSphere

1. Objective

The objective of this project is to design and develop a scalable e-commerce web application that enables users to browse, search, and purchase products seamlessly, while providing a robust platform for business growth and customer engagement.

2. Scope

In Scope: User registration & authentication, product search and browsing, product detail view, cart & checkout, order tracking, homepage features.

Out of Scope: Seller onboarding portal, warehouse/logistics management, customer support system.

3. Stakeholders

Product Manager, Business Analyst, Development Team, QA Team, Marketing Team, End Users.

4. Business Goals

Increase online sales by 25% within 6 months, improve user engagement and retention, provide personalized shopping experience, enable faster product discovery.

5. Functional Requirements

User Management: Registration, login, logout, password reset.

Product Catalog: Categories, product details, filtering, sorting.

Search: Search bar with auto-suggestions.

Cart & Checkout: Add/remove/update cart, total calculation, secure checkout, multiple payment options.

Orders: Place order, view history, track status.

Homepage: Banners, trending products, recommendations.

6. Non-Functional Requirements

Page load time < 3 seconds, availability ≥ 99.9%, responsive design, secure payment processing, scalable architecture.

7. Business Rules

Discounts applied based on promotions, only logged-in users can place orders, cart expires after 7 days, personalized recommendations based on user activity.

8. Assumptions

Users have internet access and valid payment methods, product inventory managed externally, APIs available.

9. Constraints

Third-party payment gateway integration, data privacy compliance, limited budget and timeline.

10. Success Metrics

Conversion rate improvement, reduced cart abandonment, increased session duration, higher repeat users.

11. Risks

High traffic performance issues, payment failures, incorrect recommendations.

12. Dependencies

Payment gateway, recommendation engine, product inventory system.

13. Timeline

Requirement Gathering – 2 weeks, Design – 3 weeks, Development – 8 weeks, Testing – 3 weeks, Deployment – 1 week.
